

Prince Chivaka
PhD Researcher
University of Nottingham

Prince Chivaka graduated with a BSc (Hons) degree in Biomedical Science from The University of The West of England, Bristol in 2017. He then enrolled at The University of Sheffield, completing an MSc degree in 2018. His MSc research focused on determining the potential of several molecules isolated from soybean in the amelioration of the dystrophic phenotype in Duchenne Muscular Dystrophy.

In February 2019, Prince started a PhD studentship within the Centre for Sport, Exercise and Osteoarthritis Research Versus Arthritis at the Queen's Medical Centre, University of Nottingham. His research investigates the connection between intracellular lipid accumulation and insulin resistance, with the aim of determining how both contribute to muscular atrophy during various states of immobilisation.
