

Dr John Arnold
Musculoskeletal Research Theme Lead for IIMPACT in Health &
a Senior Lecturer
University of South Australia

John received his PhD in 2014 focusing on outcomes after total knee replacement. In 2016 John was awarded a 4-year Early Career Research Fellowship from the Australian National Health & Medical Research Council which he undertook at the Institute for Rheumatic and Musculoskeletal Medicine at the University of Leeds. His research focuses on the biomechanics, clinical evaluation and treatment of foot and lower limb musculoskeletal conditions, particularly foot osteoarthritis. John's research skills and experience span biomechanical (3D gait analysis, biomechanical modelling) and clinical research studies (medical imaging, PROMs), to involvement in epidemiological analyses and systematic reviews. He is a member of the International Foot and Ankle Osteoarthritis Consortium within OARSI and the Foot & Ankle Outcomes working group for OMERACT.
